

Outputs:

Question 1

Which are the top 10 user based on having the most views on questions they post?

Final Model Query:

```
 {{ config(materialized='table') }}
```

```
-- Model: fct_top_rank_users
-- Purpose: Identify the top 10 user based on the most views on
questions they post
```

```
with user_question_views as (
    select
        s_post.post_owner_user_id,
        sum(s_post.post_view_count) as total_question_views
    from {{ ref('stg_posts') }} s_post
    where s_post.post_type_id = 1
        and s_post.post_view_count is not null
    group by s_post.post_owner_user_id
) ,
```

```
ranked_users as (
    select
        s_user.user_id,
        s_user.user_display_name as user_name,
        uqv.total_question_views,
        row_number() over (
            order by uqv.total_question_views desc
        ) as rank
    from user_question_views uqv
    inner join {{ ref('stg_users') }} s_user
        on uqv.post_owner_user_id = s_user.user_id
)
```

```
-- Return only the top 10 ranked users
select
    rank,
    user_id,
    user_name,
    total_question_views
from ranked_users
where rank <= 10
order by rank
```

## Question 2

Please show a time series of question counts with a banding of:

- the time between the posting of the question and the posting of the answer that is marked as accepted
- this should look something like this, with some judgement applied to the bandings:

Month	<1 min	1-5 mins	5 mins-1 hour	1-3 hours	3 hours-1 day	etc..
2018-01						152
2018-02						574
2018-03			895 567			114 287

Final Model:

```

{{ config(materialized='table') }}

-- Model:  fct_question_response_intervals
-- Purpose: This model counts questions grouped by monthly time
intervals [REDACTED]
-- based on how quickly their accepted answers were provided.

with time_intervals as (
